

PrimeGuard Plus — Tested to the Extreme

Nails and screws for exterior projects take a beating. Weather and moisture wreak havoc, and pressure treated lumber adds to the stress. The result is corrosion that can lead to fastener failure and ruin the appearance of your customer's project.

The good news is that Grip-Rite® PrimeGuard Plus® fasteners are specifically designed for optimal performance, appearance, and value for all outdoor projects. Every Grip-Rite PrimeGuard Plus fastener carries a lifetime guarantee against rust and corrosion.

What's more, PrimeGuard Plus fasteners are now certified with the Rust-Oleum® stamp of approval. PrimeGuard Plus nails and screws are the first and only fasteners to pass Rust-Oleum's rigorous rust and corrosion testing standards. Rust-Oleum has been trusted by America for protection against rust and corrosion since 1921. Now that trusted protection extends to PrimeGuard Plus fasteners.

PrimeGuard Plus fasteners were tested using the most thorough methods recognized by fastener manufacturers and wood treaters worldwide. Testing was conducted by Rust-Oleum, Michigan State University, and by an independent laboratory. PrimeGuard Plus fasteners performed better when tested side by side against other nationally recognized brands' coatings, including double hot-dipped galvanized.

When you stock PrimeGuard Plus, you can offer your customers a complete exterior fastener selection including nails, screws, collated fasteners, and collated screws, in both No-Rust Exterior-coated and stainless steel. Many fasteners are available in colors to match the most popular wood and other decking materials. And all PrimeGuard Plus fasteners carry a lifetime guarantee against rust and corrosion.

PrimeGuard Plus screws are project-specific and all feature a Type 17 point to minimize pre-drilling, although some may still be required depending on the material being used. Each container of PrimeGuard Plus screws includes a free bit for a quick start

on the jobsite. PrimeGuard Plus collated screws are part of the complete Grip-Rite collated screw system, but can also be used with other flexible strip collated screw attachments.

PrimeGuard Plus nails are designed for the most common outdoor applications, such as decks and play sets, along with more specialized projects such as shake, hard-board siding, and trim. And Grip-Rite PrimeGuard Plus collated nails are a natural fit with Grip-Rite 21° or 33° framing nailers; be sure to stock Grip-Rite compressors, hoses and fittings, and other accessories nearby for one-stop-project shopping.

When you carry PrimeGuard Plus, you will offer a complete, comprehensive exterior fastener assortment (over 450 SKUs), each specifically designed for exterior applications, each with a lifetime guarantee against rust and corrosion. So whether you are selling to pros or weekend warriors, make sure you have Grip-Rite PrimeGuard Plus premium exterior fasteners. PrimeGuard Plus and Rust-Oleum; two brands you and your customers can trust.

Grip-Rite and Grip-Rite PrimeGuard – available exclusively from PrimeSource Building Products, Inc. distributions centers throughout the U.S. and Canada.
